- (2) Determines how people determine the price of a product or service
- (3) Determines how people disregard the price of a product or service
- (4) Determines how people value the features of a product or service

★ Read the passage carefully and answer the questions (88-92):

Products can be classified in several ways. In terms of durability and reliability. Products can be nondurable goods or durable goods or services. In consumer goods category, products are convenience goods (staples, impulse goods, emergency goods), shopping goods (homogeneous and heterogeneous), specialty goods or unsought goods. In the industrial goods category, products fall into one of the three categories, materials and parts (raw materials and manufactured materials and parts, capital items, (installations and equipment), or supplies and business services (operating supplies, maintenance and repair items), maintenance and repair services and business advisory services. Most companies sell more than one product. A product mix can be classified according to width, length, depth and consistency. These four dimensions are the tools for developing the companies marketing strategies and deciding which product line to grow, maintain, harvest and divest. To analyse a product line and decide how many resources should be invested in that line, product line managers need to look at sales and profits and market profile.
